

**People love music  
and  
they are fond of sharing music with their friends**

Music is usually shared by several ways.

Music APP

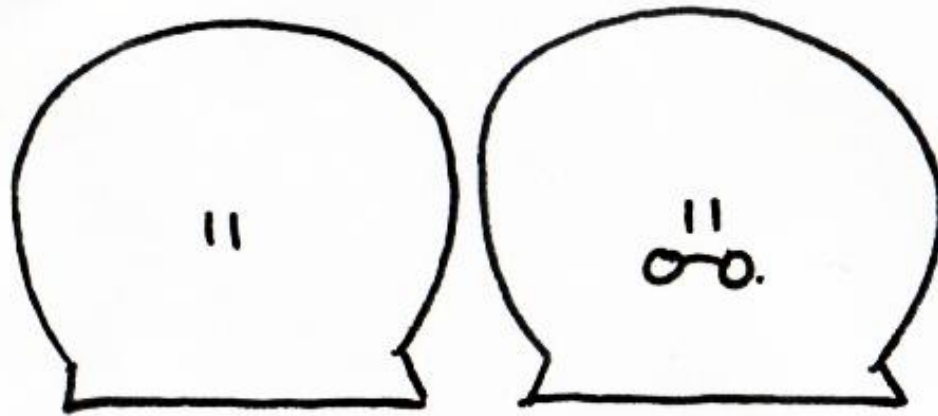

Social Network Sites

Listen to music together

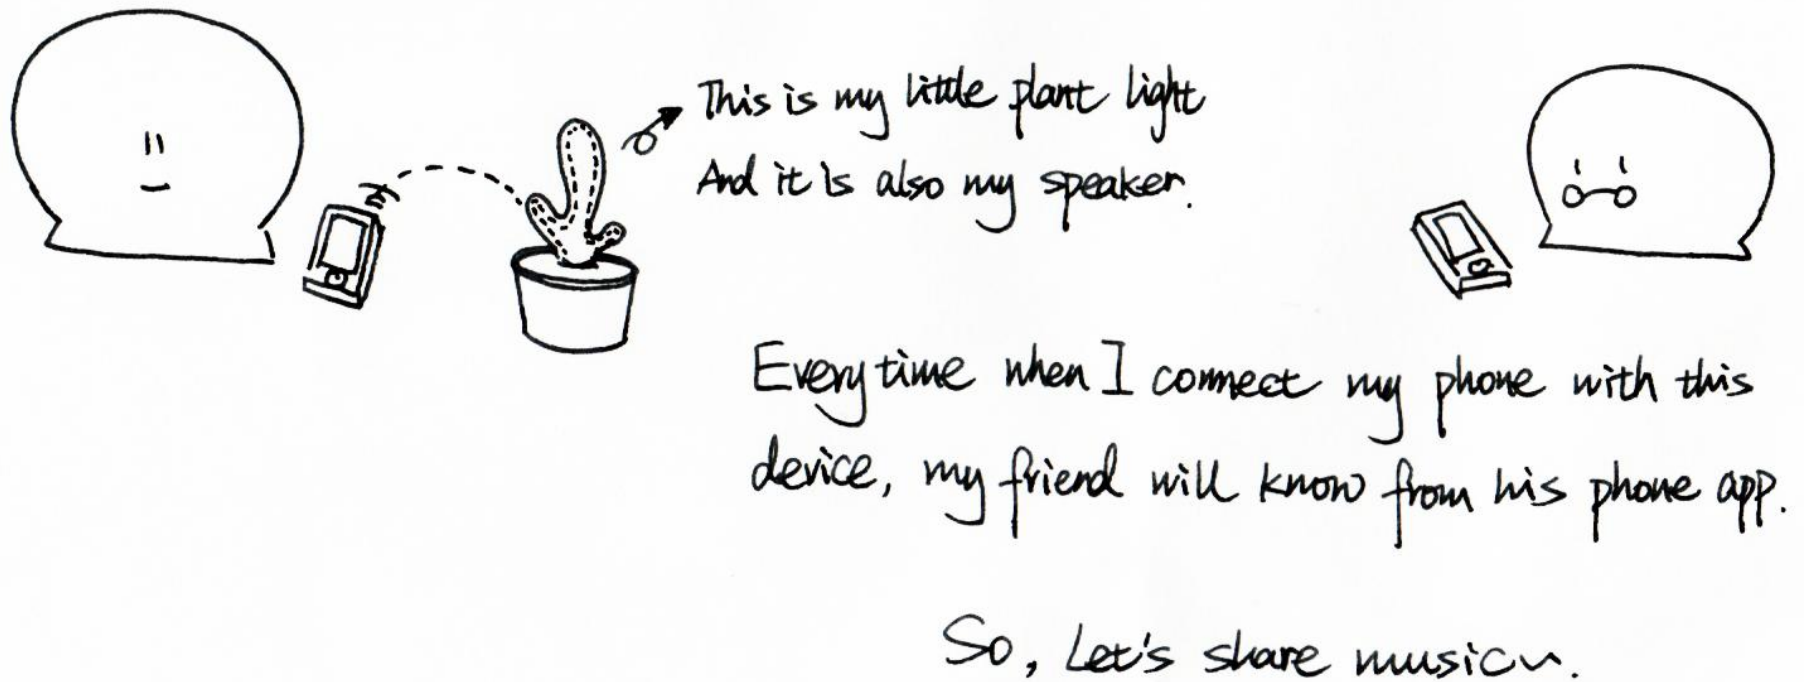

Therefore, I want to use music to connect people's life.

# Storyboard

They are friends.  
All of us like music.

# Storyboard

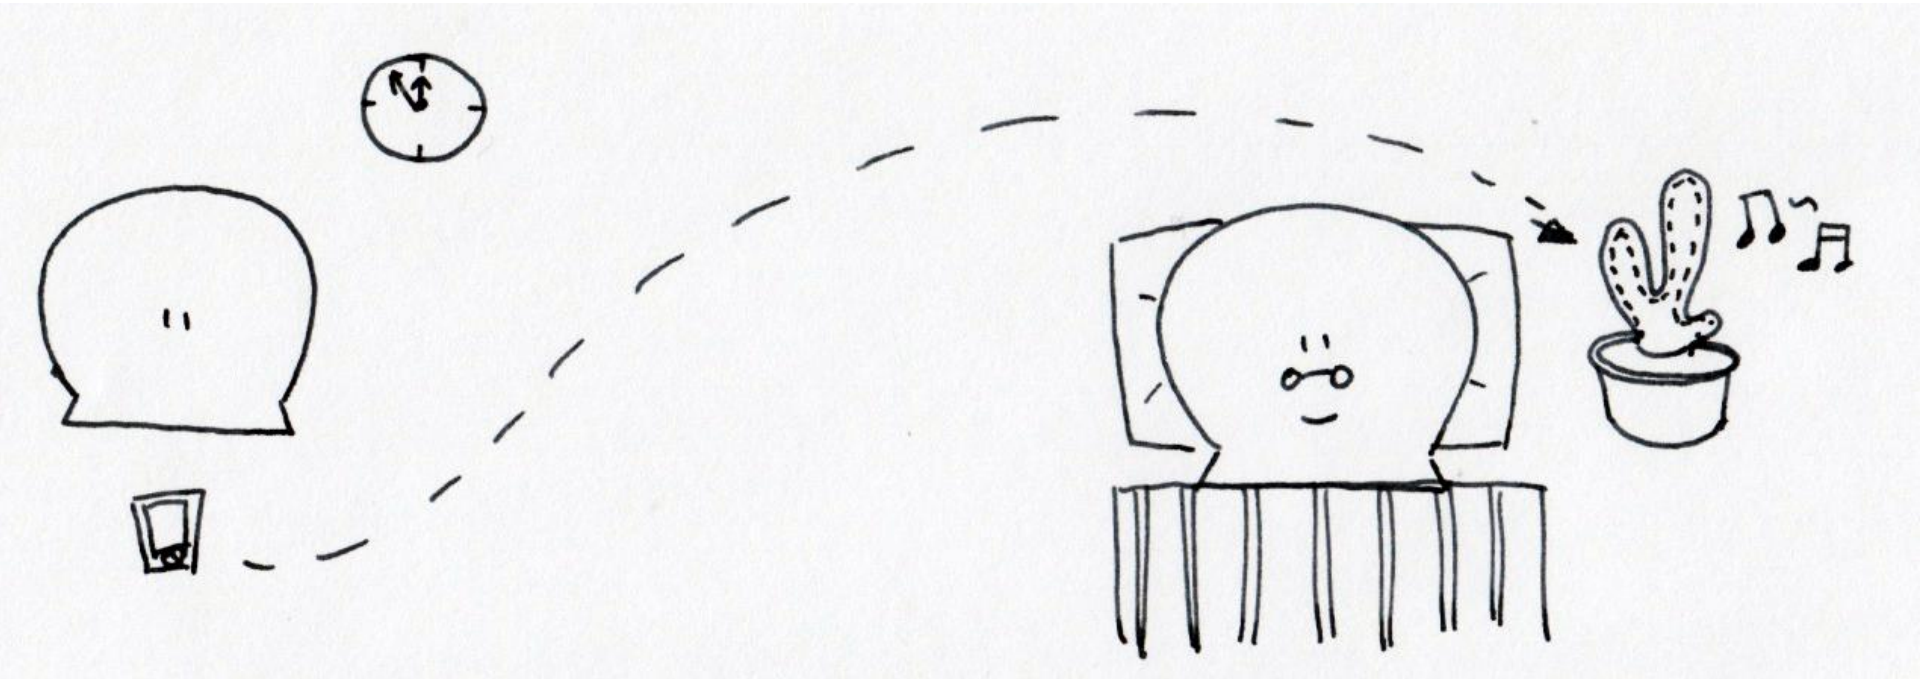

# Storyboard

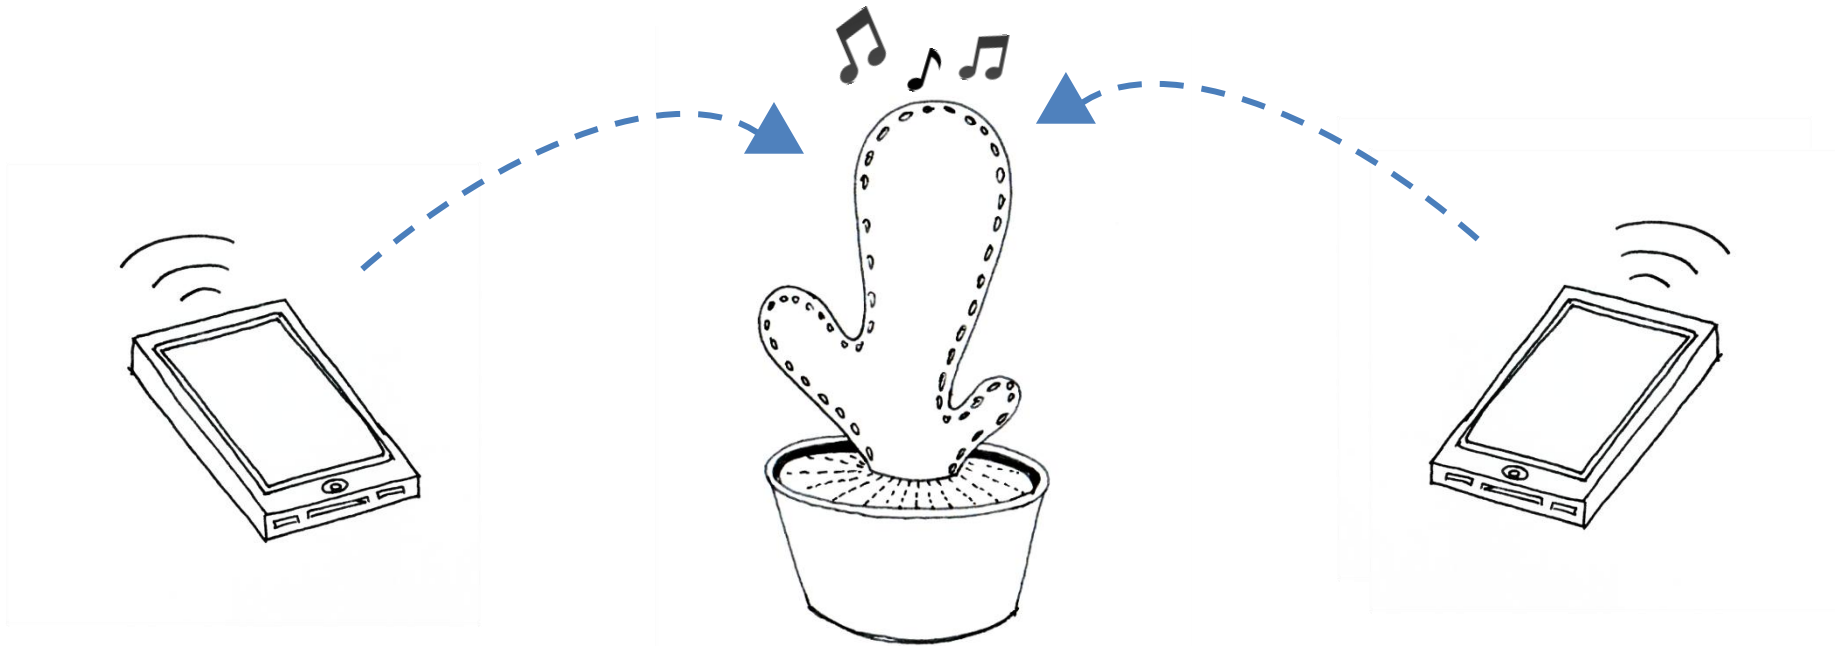

My friend often play music through my little plant light when I cook.

# Storyboard

I also transfer light music to my friend's light for remind to sleep

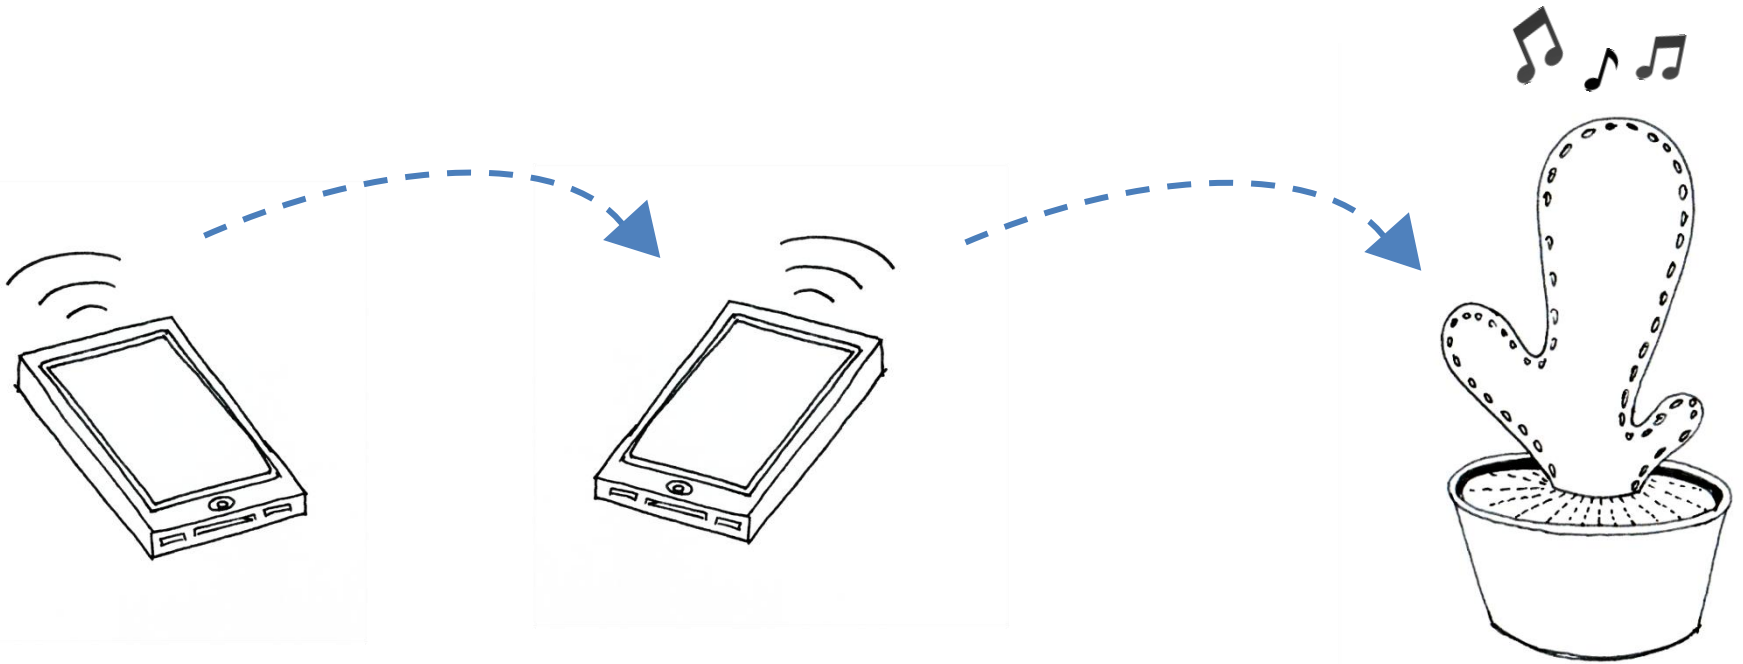

# Possible methods

## Method 1

Each phone transfers music to the little plant light and this device plays music one by one.

# Possible methods

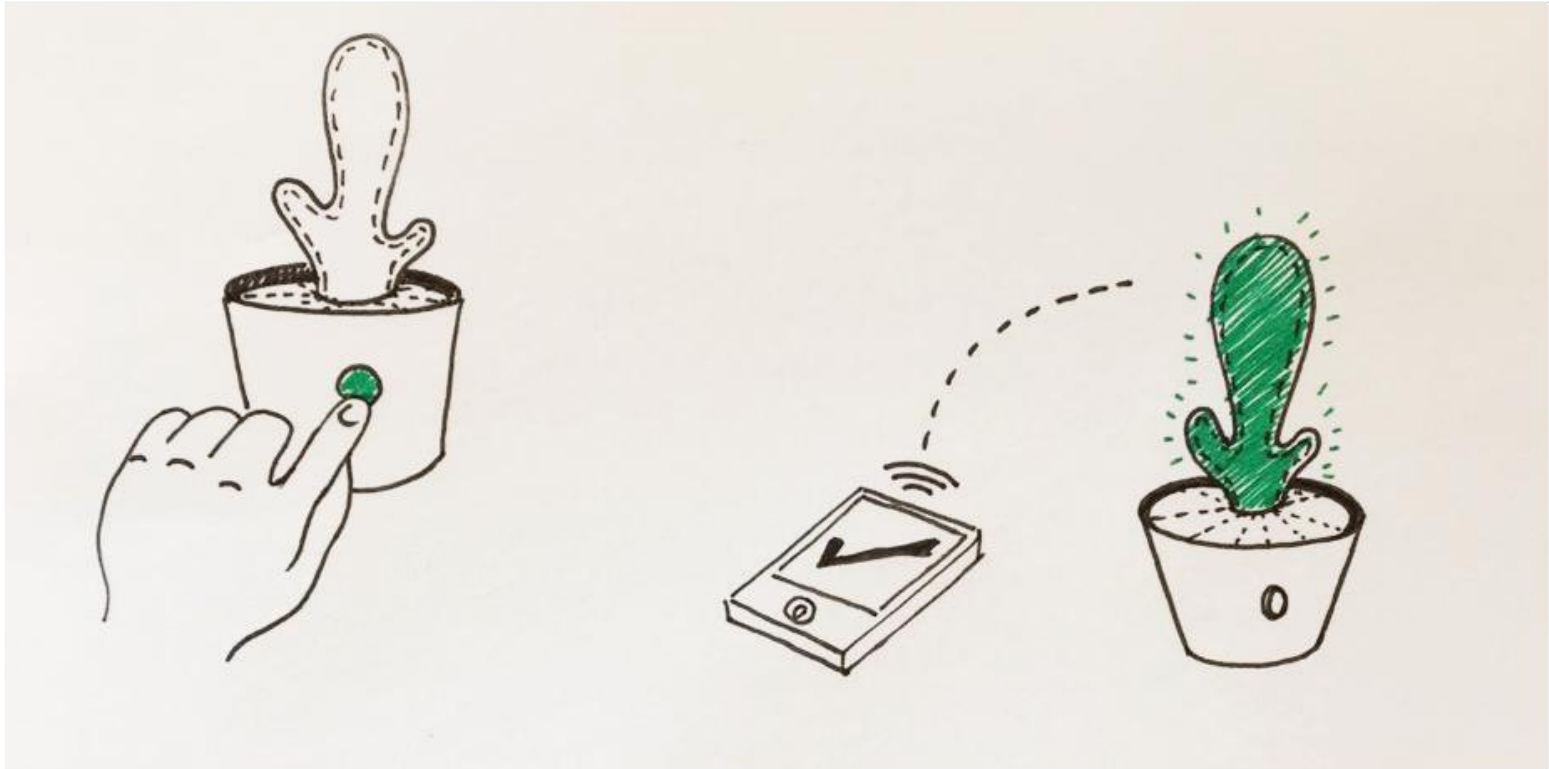

## Method 2

My friend share music from his phone to my phone by APP and my phone connect with the little plant light and play these music.

# How to use it

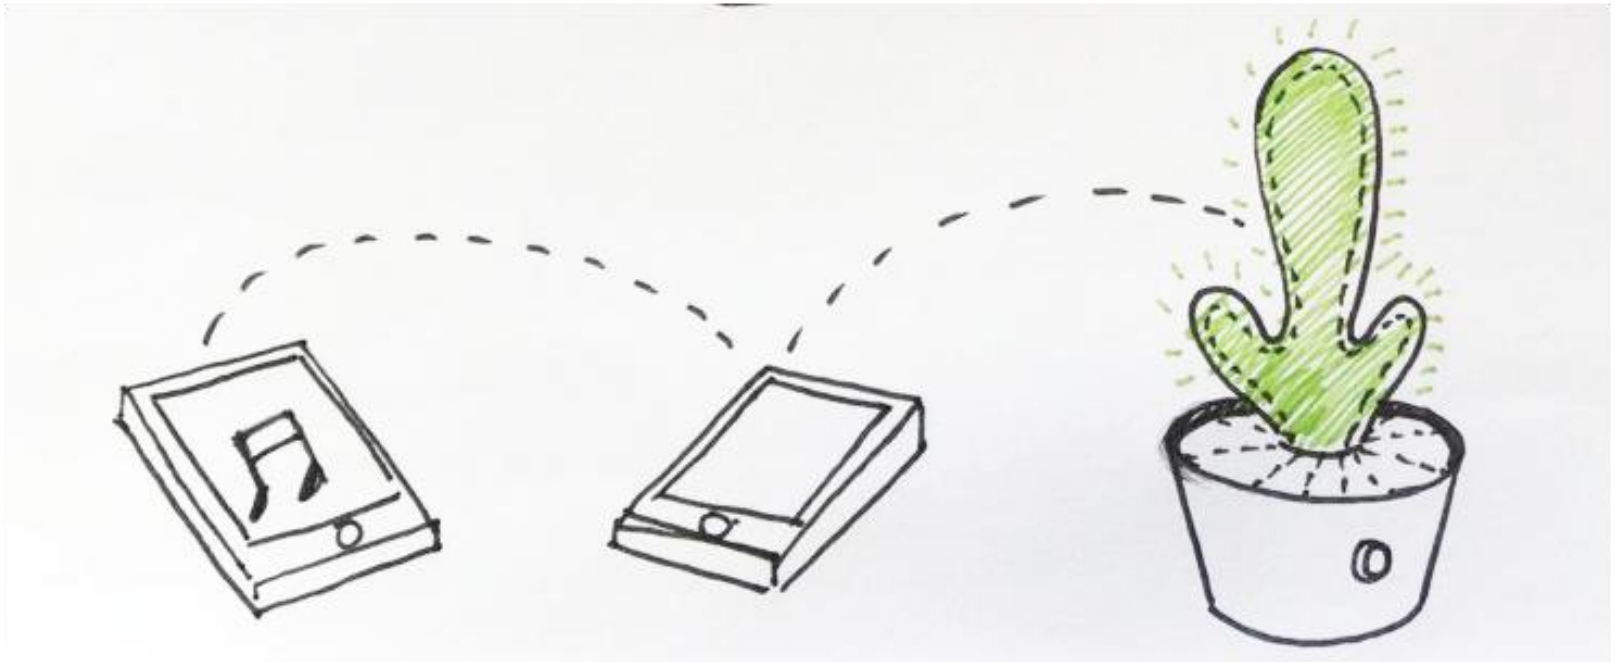

The first step: to turn up the opening switch;

The second step: to connect phones with device and the plant light will flash green light;

The third step: to play music through the device and it keeps green light;

The fourth step: when people share music to your device, the light will turn to peak green and keep flashing to remind you. When the current music finished the device will play the music that you friends share to you. At the same time, the light will light as peak green.

I attempt to use color and change of light as signals to transfer people's action to each other. People also can express their emotion through different music and their life can be indeed connected by the little plant light.
