

WHO AM I?

I am YAXUN XIA. My background/undergraduate is in Product Design. I have studied some software as Rhinoceros, Photoshop for helping expressing my concepts. I have good ability for drawing in my style as you can see.

This is the first time I know Arduino and use it connecting with product design. For me, there is a difference between studying in China and UK. In China, we usually focus on finding and solving some existing problems. In this project, we pay more attention on some emotional area and interaction between people. I spend long time to change my thinking and try to focus on some interesting interaction. I like my project very much because it has the interaction between people and it also comes from my daily. I am fond of sharing music because I can express my emotion. Especially, I go aboard for studying and I have the time gap with my friends. But I still feel they accompanying with me because we always share music. I think good design is coming from life.

Most of my time in this project was spent on thinking about nice and interesting stories as well as in the making of the prototype. I also have never make or edited a video before, so please lower your expectation.
